### EXPERIENCE

- Marlbo Trading Company  
Sales Assistant - Measuring Instrument (LV)  
2021 December - 2024 February

### EDUCATION

- Undergraduate in Sri Lanka Institute of Information Technology  
BSc (Hons) Information Technology Specializing in Information Technology  
(Current Academic Status: Second Year, Second Semester)
- Currently Studying a Certificate Course about Linux Operating System in eDX (2024 - March)
- Currently Studying a Certificate Course about Programming in Python in Open Learning Platform - UoM (2024 - March)
- Successfully completed Machine Learning course in Miha Institute (2023 July - 2024 February)
- Successfully completed level 4 (Intermediate Level) in English course in Aquinas College of Higher Education  
(2021 April - 2021 August)
- Experienced in Using C , C+ , Java, HTML ,CSS, Bootstrap, JavaScript, ReactJS, SQL, MongoDB, NodeJS, Express, Android Studio and Tailwind Software
- General Certificate of Education Advance Level Examination 2020 (Index Number: 1791874)  
Combined Mathematics - C  
Physics - C  
Chemistry - C

## EXTRA CURRICULAR ACTIVITIES

- **Currently working as a director in Leo Club of Royal Achievers in Kalutara (2023 - 2024)**
- **Worked as a director in Leo Club of Royal Achievers in Kalutara (2022 - 2023)**
- **Worked as an active member in Leo Club of Royal Achievers in Kalutara (2022 - 2023)**
- **Former Head Prefect of Kalutara Balika National School in (2017-2018)**
- **Worked as an active Leo member in Leo club of Kalutara Balika (2017-2018)**
- **2nd place in Choir Singing Competition in zonal level (2016)**
- **Participating as an actress in the William Shakespeare drama competition at the school level and many other events. (2017)**
- **All Island 3rd place in Netball tournament.**
- **Zonal Level athletic player (Discus throwing and running events).**
- **School level Volleyball, Hokey, Swimming player.**

## PROJECTS

### • **Portfolio website**

I made it by using JavaScript, HTML, CSS, and Bootstrap using VS code. I used Parallax effect technology to build it. So it is very difficult to make it responsive because there are no sample codes or references to do that. I used the W3Schools web site, the MDN Web Docs site, and YouTube to build this. I include my personal details and host it using GitHub.

### • **Year 1 Semester 2 Project - Online Driving License System**

In May 2022, I submitted this as our 'Introduction to Web Development' module semester project. I am the team leader with five members of the group, and we used HTML, CSS, JavaScript, PHP, and SQL to build this. I uploaded it to GitHub for your reference.

### • **Year 2 Semester 2 Project - Restaurant Management (Ongoing)**

In the information technology project module, we chose to build a hotel management system using HTML, CSS, JavaScript, React, MongoDB, NodeJS, Express, and Bootstrap. I am the one who built the user management system for the system. I am the team leader of the eight members of the group project, and it is still ongoing. I've uploaded all of the relevant documents to GitHub.

### • **Forward - Stress & Study management app for learners (Ongoing)**

This is also my ongoing project, which I am building to show my skills and innovation. I am using Android Studio, HTML, CSS, Bootstrap, MongoDB, React, NodeJS, Express, Figma and many more Software to build this. I refer Anjela Yu's web development Recordings, YouTube, W3Schools, MDN Web Docs, my lecture recordings and related apps and websites for this. This is still an ongoing project, and I uploaded my design to the GitHub.

### **DESCRIPTION ABOUT THE MOBILE APP & WEB APPLICATION:**

*There are so many features, like, Screen lock, Apps Lock, Timetable management, meditations, calm music, and blogs. Blue color is the color of relaxation so I chose blue for the design. Purpose of this App and website is to help the learners who work under pressure manage their day-to-day lives without wasting their time.*

### • **Image Detection Machine Learning Based Project**

I do this as a mini-project for the Machine Learning Course. To do this, I used the Keras CIFAR 10 data set, and it gives the correct image type when we give the picture.

### • **Voice Emotion Recognition Machine Learning Based Project**

I built this as my final project in the machine learning course. I used the Kaggle Ravdess voice emotion dataset for this. I refer you to YouTube videos for building this. This is a small ML project, but this is the first step of my AI journey.
